

Question:

- If you create a constructor method to build a **DVD** by title then create a constructor method to build a **DVD** by category. Does JAVA allow you to do this?

Answer:

- If two constructors both have just ONE parameter with same String type like title and category, then JAVA does not allow it, unless those two parameters have different types.
- However, if two constructors have different number of parameters then JAVA allows it as this called constructor overloading.
