Student ID: 20235560

Use-case diagram and class diagram

Working with method overloading

```

public void addDigitalVideoDisc(DigitalVideoDisc [] dvdList) {
    for (DigitalVideoDisc disc : dvdList) {
        if (qtyOrdered < MAX_NUMBERS_ORDERED) {
            itemsOrdered[qtyOrdered] = disc;
            qtyOrdered += 1;
            System.out.println(x:"DVD list added");
        } else {
            System.out.println(x:"Maximum capacity reached");
        }
    }
}

public void addDigitalVideoDisc(DigitalVideoDisc dvd1,DigitalVideoDisc dvd2) {
    if (qtyOrdered + 1 < MAX_NUMBERS_ORDERED) {
        itemsOrdered[qtyOrdered] = dvd1;
        itemsOrdered[qtyOrdered + 1] = dvd2;
        qtyOrdered += 2;
        System.out.println(x:"2 DVD added");
    } else {
        System.out.println(x:"Maximum capacity reached");
    }
}

```

- Try to add a method addDigitalVideoDisc which allows to pass an arbitrary number of arguments for dvd. Compare to an array parameter. What do you prefer in this case?

I would prefer array parameter as it is easier to add a certain amount of DVD

Passing parameter

True swap method:

```

public class TestPassingParameter {

    public static void main(String[] args) {
        // TODO Auto-generated method stub
        DigitalVideoDisc jungleDVD = new DigitalVideoDisc(title:"Jungle");
        DigitalVideoDisc cinderellaDVD = new DigitalVideoDisc(title:"Cinderella");

        swap(jungleDVD, cinderellaDVD);
        System.out.println("jungle dvd title: " + jungleDVD.getTitle());
        System.out.println("cinderella dvd title: " + cinderellaDVD.getTitle());

        changeTitle(jungleDVD, cinderellaDVD.getTitle());
        System.out.println("jungle dvd title: " + jungleDVD.getTitle());
    }

    public static void swap(DigitalVideoDisc dvd1, DigitalVideoDisc dvd2) {
        String tempTitle = dvd1.getTitle();
        dvd1.setTitle(dvd2.getTitle());
        dvd2.setTitle(tempTitle);
    }

    public static void changeTitle(DigitalVideoDisc dvd, String title) {
        String oldTitle = dvd.getTitle();
        dvd.setTitle(title);
        dvd = new DigitalVideoDisc(oldTitle);
    }
}

```

- Is JAVA a Pass by Value or a Pass by Reference programming language?

JAVA is a pass by value programming language. The dvd1 and dvd2 in the method are copies of the reference to the original dvd1 and dvd2

- After the call of **swap(jungleDVD, cinderellaDVD)** why does the title of these two objects still remain?

The dvd1 and dvd2 in the method are copies of the reference to the original dvd1 and dvd2, therefore swap only swap the copies, not change the original object

- After the call of **changeTitle(jungleDVD, cinderellaDVD.getTitle())** why is the title of the JungleDVD changed?

changeTitle take the address and modify title at that address, therefore it also change the original dvd
